

Frequently Asked Questions about Dental Extractions!

Having to undergo teeth extraction is something that is not very common in terms of dental treatments today. It is thought better to retain teeth instead of having them extracted; however, sometimes the extraction of the teeth is the only way to treat a dental condition. The dentist will be the one who will evaluate whether or not the teeth should be extracted or retained and that is dependent upon the overall condition of the teeth. If you are going for dental extractions, sometime in the near future then you need to know about the frequently asked questions about dental extractions.

What are the Reasons for Dental Extractions?

There are lots of different reasons for dental extractions and here are some of the major dental issues that may require you to undergo the dental extraction treatment today. Here are some of them:

- Periodontal disease
- Extensive tooth damage
- To prevent further dental complications
- To improve the appearance of the teeth
- Teeth with no regular function
- Vertical cracks appearing in the tooth roots

How are the Teeth Extracted?

When you are undergoing tooth extraction you need to understand the entire process in order to calm your nerves and relax before the operation. There are different methods of dental extractions, which vary according to the type of teeth, the roots and the positioning of the jaw. Most of the times the teeth will be removed without any complications, but sometimes there may be some unforeseen problems, which include:

- Abnormal positioning of the tooth
- Large or curved roots
- Adjacent teeth have crowns
- An impacted or unerupted tooth that is attached to the jaw bone

Sometimes the tooth may even need to be divided into separate segments, so that it may be removed and extracted safely from the mouth.

How to Take Care of Teeth after Extraction?

Once you have undergone the dental extraction surgery, you will be required to take extra care of your teeth and mouth in order to avoid any possible side effects. Here is how you should look to take care of teeth after extraction:

- Take lots of rest
- Avoid drinking alcohol
- Eat lots of soft foods
- Drink plenty of fluids
- Use ice packs to manage pain & reduce swelling
- Don't drive or engage in exercise after you have been sedated

What are the Possible Side Effects of Extraction?

When you are undergoing dental extraction surgery, you will have to undertake a slight risk, since complications are a part of every major surgery. Your dentist, however, will try to minimize the risks and provide you with a dental extraction with the bare minimum side effects. You may have to face some of the following possible side effects after dental extraction:

- Bleeding (Haemorrhage)
- Pain
- Sinus problems
- Dry socket
- Infection
- Damage to nearby teeth
- Numbness or altered sensation
- Thinning of jaw bone

You should consult with your dentist and ask about the possible side effects of your dental extraction before undergoing the surgery.
